Data Insights:

- We can see there are NULL values in the data. So, we can use respective imputation methods to replace them
- If we feel the respective columns are not useful to complete task, we can remove them

Data Preprocessing**Imputation : NULL values are replaced with median imputation method**In [11]: `impt_df=df.fillna(df.median())`

In [12]: `impt_df.describe()`

Columns with only one unique value after imputation mean they do not contribute anything to our signal, we can safely ignore them
